

Structured Analytics – Repeated Content Identification Setup Basics

This guide contains a workflow with basic information for setting up repeated content identification.

For more detailed information, refer to the [documentation site](#).

Repeated content identification setup

The setup for running language identification is comprised of two components:

1. Saved search
2. Structured analytics set

1. Saved Search Setup

Use the following conditions and fields to create the saved search used for email threading. You don't need to set a sort order on this search.

Search Name

There is no recommendation for the saved search name. Follow your team's normal protocol for naming searches.

Conditions

The condition for this search can be the same as the Conceptual Index search if it is different than the conditions noted below.

- Extracted text size is greater than 0 kb
- Extracted text size is less than 30,000 kb

Note: For workspaces with millions of documents, we recommend that you consider a sampling workflow. For more information, see [Sampling for Repeated Content](#) on the documentation site.

Fields

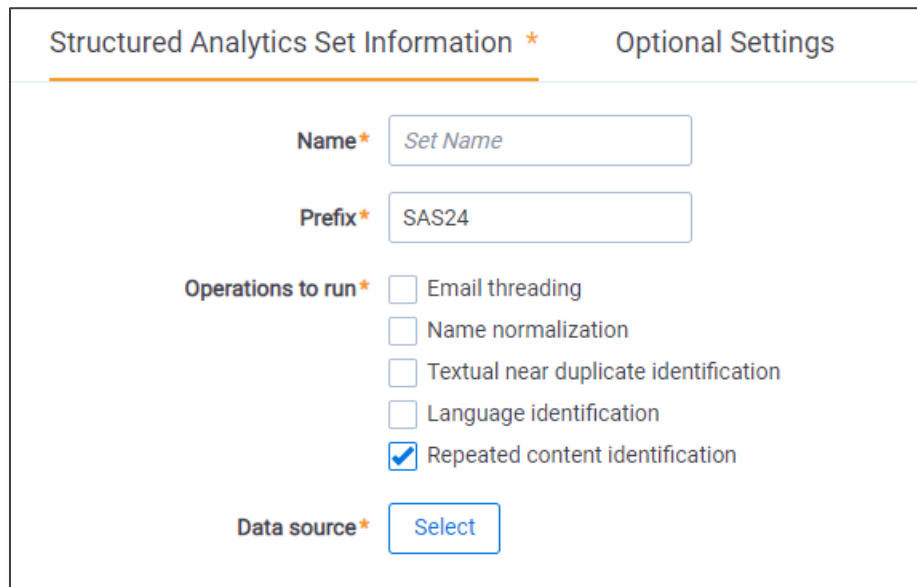

Any fields are acceptable.

2. Structured Analytics Set

Here are the steps and choices for creating a structured analytics set.

Structured Analytics Set Information

- **Name** - enter a name for the structured analytics set.
- **Prefix** - keep the default prefix or add your own prefix. Shorter prefixes (even just two characters, such as "LI") take up less space in your views.
- **Operations to run** - select **Repeated content identification**.
- **Data source** - select the saved search you created above.

The screenshot shows a web form titled "Structured Analytics Set Information" with a sub-tab "Optional Settings". The form contains the following fields:

- Name***: A text input field with the placeholder text "Set Name".
- Prefix***: A text input field containing the value "SAS24".
- Operations to run***: A list of five checkboxes:
 - ☐ Email threading
 - ☐ Name normalization
 - ☐ Textual near duplicate identification
 - ☐ Language identification
 - ☒ Repeated content identification
- Data source***: A button labeled "Select".

Repeated Content Identification

- **Minimum number of occurrences** - the minimum number of times a phrase must appear to be considered repeat content. We typically set this to .005 times the number of documents in your saved search.
- **Minimum number of words** - leave as default.
- **Maximum number of words** - leave as default.
- **Maximum number of lines to return** - leave as default.
- **Number of tail lines to analyze** - leave as default.

Repeated Content Identification

| | |
|------------------------------------|----------------------------------|
| Minimum number of occurrences* | <input type="text" value="500"/> |
| Minimum number of words* | <input type="text" value="10"/> |
| Maximum number of words* | <input type="text" value="100"/> |
| Maximum number of lines to return* | <input type="text" value="4"/> |
| Number of tail lines to analyze* | <input type="text" value="16"/> |

Optional Settings

- Choose the appropriate Analytics server.
